

Final report

1.1 Project details

Project title	Promotion of research results within bioenergy, hydrogen and fuel cells
Project identification (program abbrev. and file)	EUDP_64015-0551 Link til energiforskning.dk
Name of the programme which has funded the project	EUDP
Project managing company/institution (name and address)	BioPress Strandskadevej 7 8250 Egå
Project partners	BioPress
CVR (central business register)	14290036
Date for submission	31th May 2018

1.2 Short description of project objective and results

The project has to improve the communication between researchers and practitioners, provide investors to projects, show which projects may be good business and finally point out technical subjects for new projects. The promotion of the results of the research is to be published in the magazine FIB and through electronically newsletters.

Danish version:

Projektet skal være med til at forbedre kommunikationen mellem forskere og praktikere, hjælpe projekter med at skaffe investorer, belyse hvilke projekter der bliver til en god forretning, samt indkredse forskningsfaglige emner til brug for nye projekter.

1.3 Executive summary

The purpose of this project is to ensure a better and more rewarding communication between researchers and practitioners, to illustrate which projects may become good business, to follow up the ongoing projects and to encircle subjects that can be used in new projects.

The results of the research are communicated through:

- Production and distribution of the magazine FiB four times a year. The magazine is distributed in both an electronic version as well as a printed version (3,000 numbers printed).
- Production and distribution of an electronic newsletter eight times a year.
- Current news on the homepage www.biopress.dk.

1.4 Project objectives

The purpose of the project is to ensure a better and more rewarding communication between researchers and practitioners, to illustrate which projects may become good business, to follow up the ongoing projects and to encircle subjects to be used in new projects.

The project has been implemented as planned.

1.5 Project results and dissemination of results

The project has produced and distributed eight editions of the magazine FiB and 16 electronic newsletters. In addition, the website www.biopress.dk has been updated regularly with news about conferences, projects, etc.

Magazines, newsletters, articles, description of completed projects etc. can be downloaded from www.biopress.dk.

There has been a good dialogue with readers and researchers. The project has received very positive response, and researchers have appreciated that FiB has been able to communicate research results to a wider circle than they normally have contact with. In several cases, the project has also helped to give scientists a larger network. It has improved the opportunities to make use of research results in practice and has given scientists input into new areas where there may be need for further research.

1.6 Utilization of project results

The purpose of this project is to ensure a better and more rewarding communication between researchers and practitioners, to illustrate which projects may become good business, to follow up the ongoing projects and to encircle subjects that can be used in new projects. Therefore we do not expect further commercial activities.

1.7 Project conclusion and perspective

The project has received very positive response, and researchers have appreciated that FiB has been able to communicate research results to a wider circle than they normally have contact with. In several cases, the project has also helped to develop the scientists' contacts. It has improved the opportunities to make use of research results in practice and has given scientists input into new areas where there may be need for further research.
